Workflow Exploration Report

Access Unsplash Datasets (Lite and Full)

Website: <https://unsplash.com>

Feature Area: Developer Portal

Goal: Navigate to the data portal and access dataset download links. Success: Redirected to GitHub or Typeform.

Generated: April 07, 2026 at 06:41 AM

The AI successfully navigated the Unsplash Developer Portal, extracting technical documentation for hotlinking and accessing the dataset download portal. It verified the redirect to GitHub for the Lite dataset and reviewed the API changelog, though further registration steps were halted by a security block.

Step-by-Step Walkthrough

1. Unsplash Developer Portal

The AI navigates to the Unsplash Developers homepage to begin exploring the available resources.

The screenshot shows the Unsplash Developers homepage. The left sidebar contains a navigation menu with categories like API Documentation, Getting started, Schema, Authorization, Pagination, Rate limiting, Dynamically resizable images, BlurHash Placeholders, Content safety, Supported languages, Current user, and more. The main content area features 'Quick shortcuts' with links to 'Setting up an application', 'Search photos by keyword', 'Get a random photo', and 'List new photos'. Below this is a 'Getting started' section with a brief overview and a link to 'Creating a developer account'.

2. API Hotlinking Documentation

The AI explores the technical documentation to identify requirements for image hotlinking and implementation.

The screenshot shows the Unsplash API Hotlinking documentation page. The left sidebar is the same as the previous page. The main content area is titled 'Hotlinking' and explains that unlike most APIs, Unsplash requires image URLs to be directly used or embedded in applications. It provides a list of links to the guidelines on hotlinking and the documentation on how to hotlink to resized images. Below this is a 'Deprecation policy' section and a 'Schema' section with details on 'Location', 'Version', and 'Summary objects'.

3. Dataset Access Options

The AI navigates to the data portal to compare the Lite and Full versions of the Unsplash dataset.

4. GitHub Dataset Repository

Clicking the download link for the Lite dataset successfully redirects the AI to the official GitHub repository.

5. API Changelog

The AI accesses the changelog to review the chronological history of API updates and feature changes.

6. Security Access Blocked

An automated security challenge from BotStopper prevents the AI from proceeding with the developer registration form.

Access Unsplash Datasets (Lite and Full)

Navigate to the data portal and access dataset download links. Success: Redirected to GitHub or Typeform.

The AI successfully navigated the Unsplash Developer Portal, extracting technical documentation for hotlinking and accessing the dataset download portal. It verified the redirect to GitHub for the Lite dataset and reviewed the API changelog, though further registration steps were halted by a security block.

- Navigate to <https://unsplash.com/data>
- To access the Lite version: Click 'Download' under the Lite dataset section to redirect to GitHub
- To access the Full version: Click 'Request access' under the Full dataset section to open the Typeform application
