Workflow Exploration Report

Check API System Status

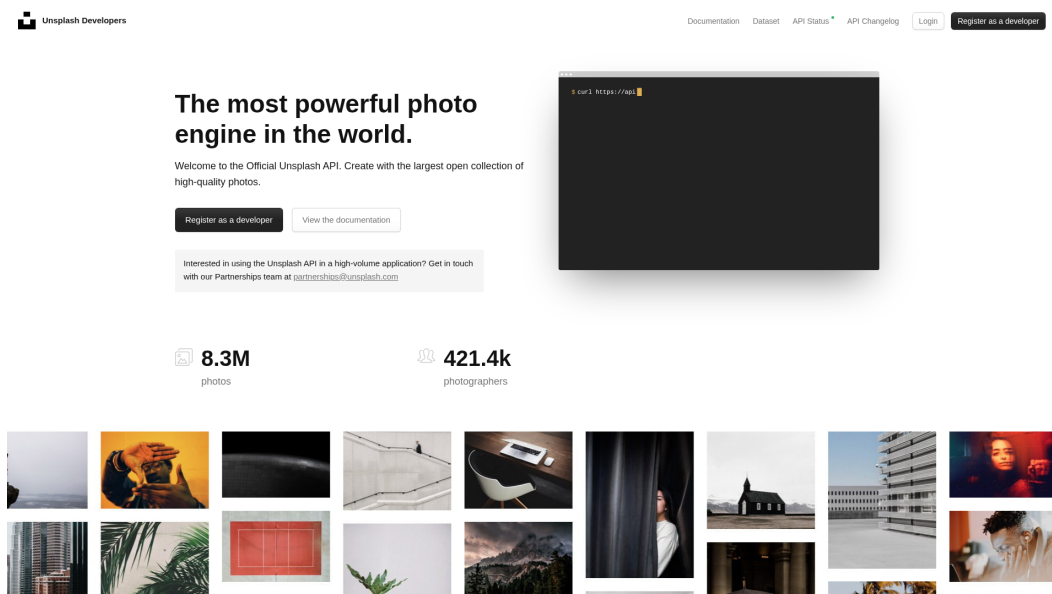

Website: <https://unsplash.com>

Feature Area: Developer Portal

Goal: Verify the operational status of the Unsplash API. Success: Status page shows system health.

Generated: April 07, 2026 at 12:23 PM

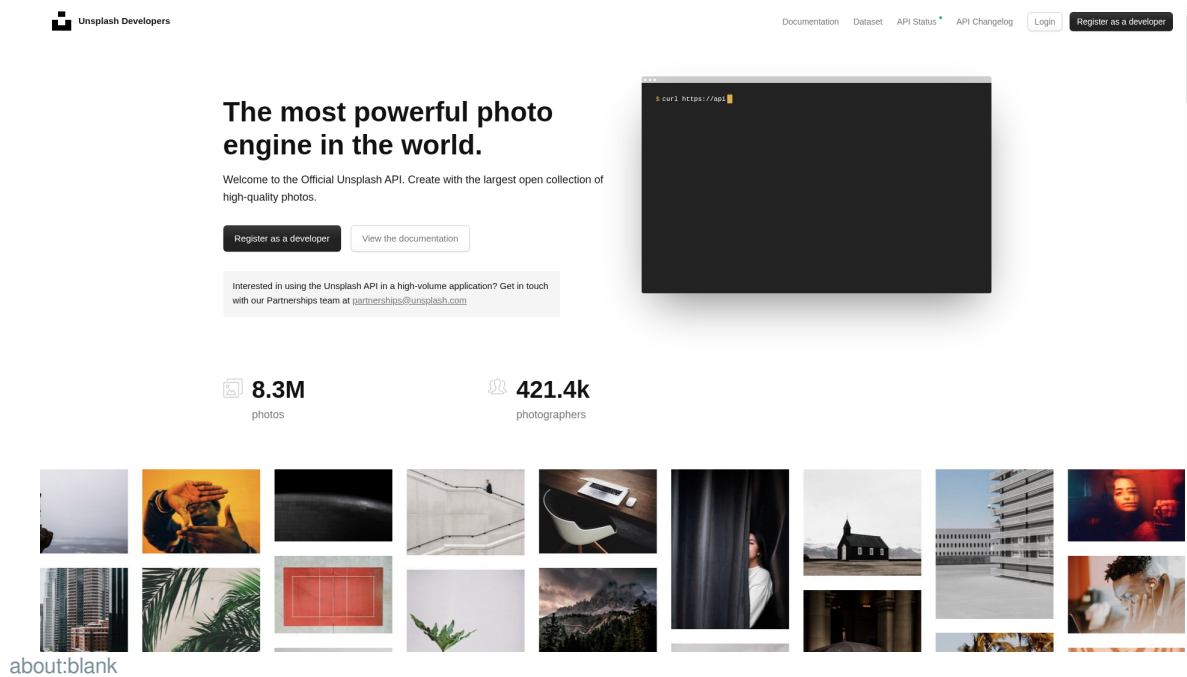

The AI successfully verified the Unsplash API status, confirming that all systems are operational. It also explored the developer documentation, changelog, and dataset pages to ensure resource accessibility, though the registration process was blocked by bot detection.

Step-by-Step Walkthrough

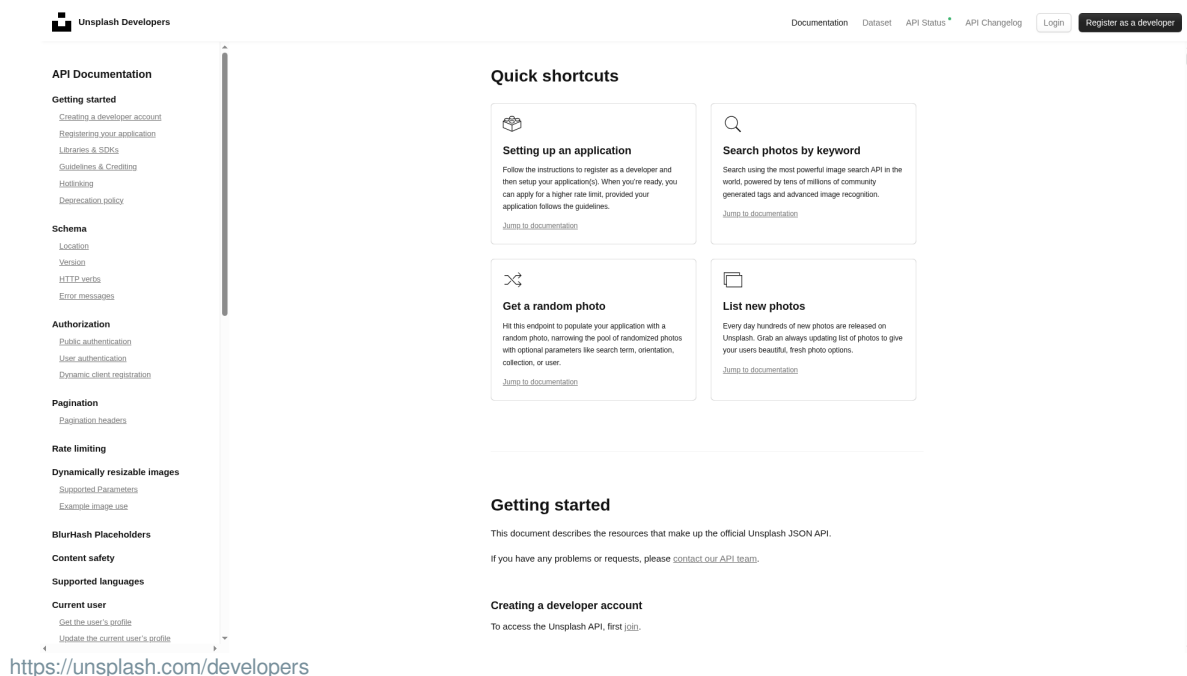

1. Unsplash Developers Landing Page

The AI navigates to the Unsplash Developers portal to begin the system health check.

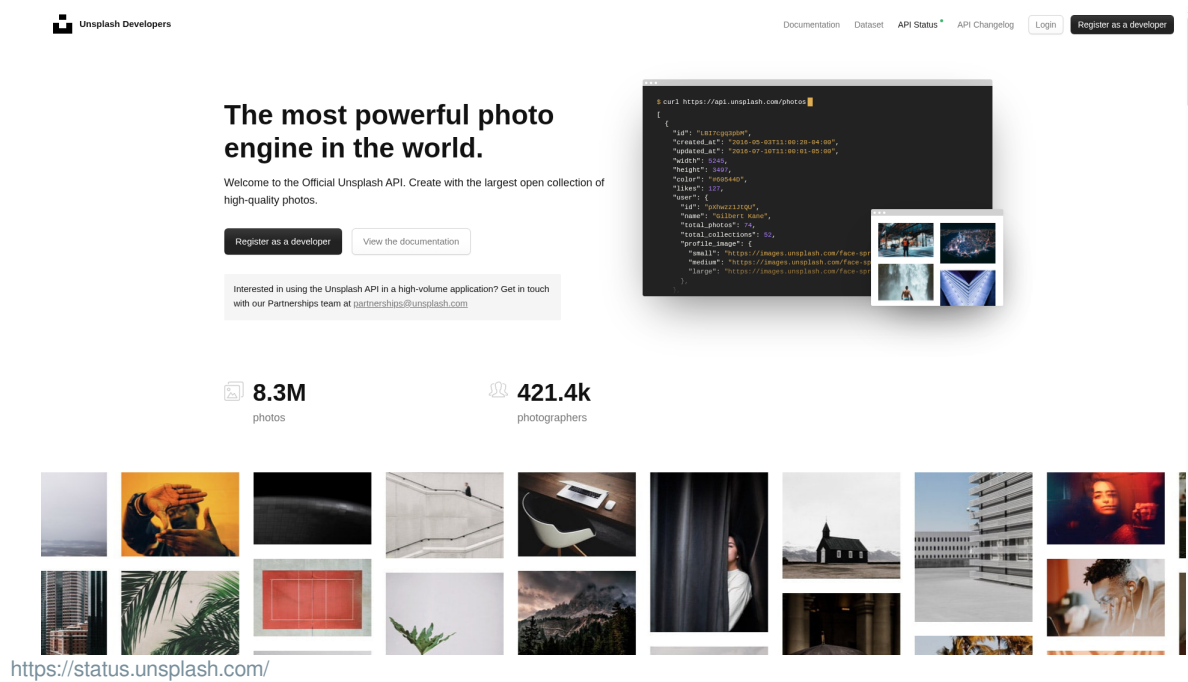

2. API Documentation Overview

The AI accesses the documentation page to ensure technical resources are available for developers.

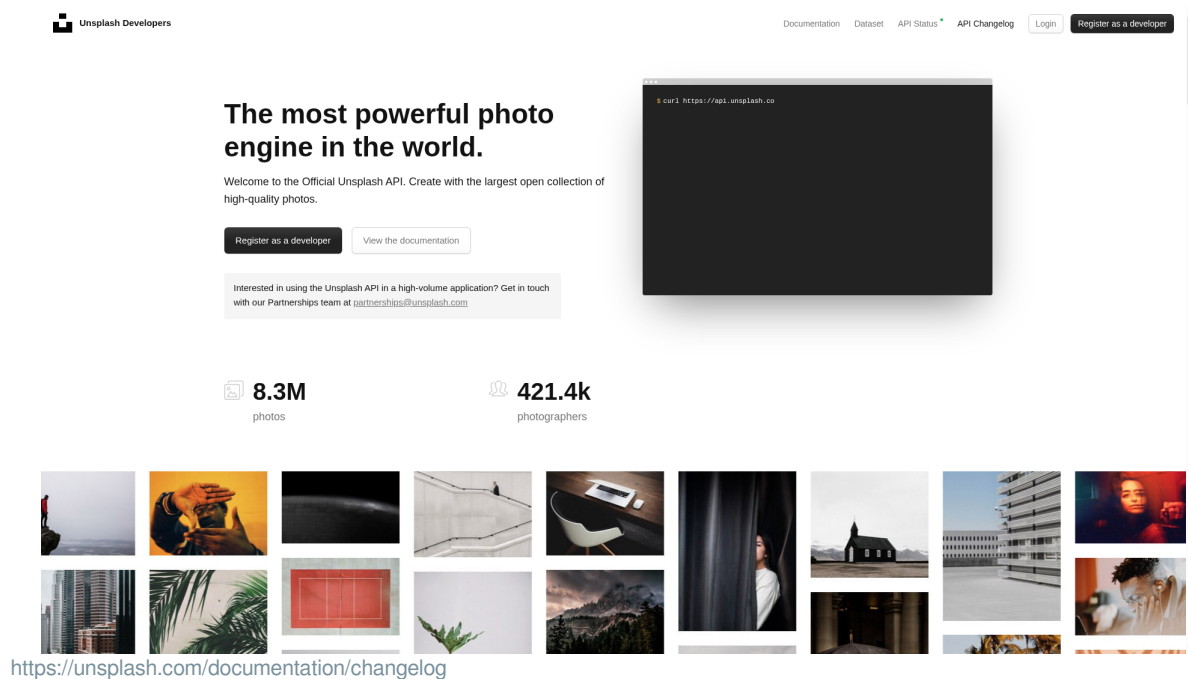

3. API System Status Check

The AI confirms that all Unsplash API services are currently operational and healthy.

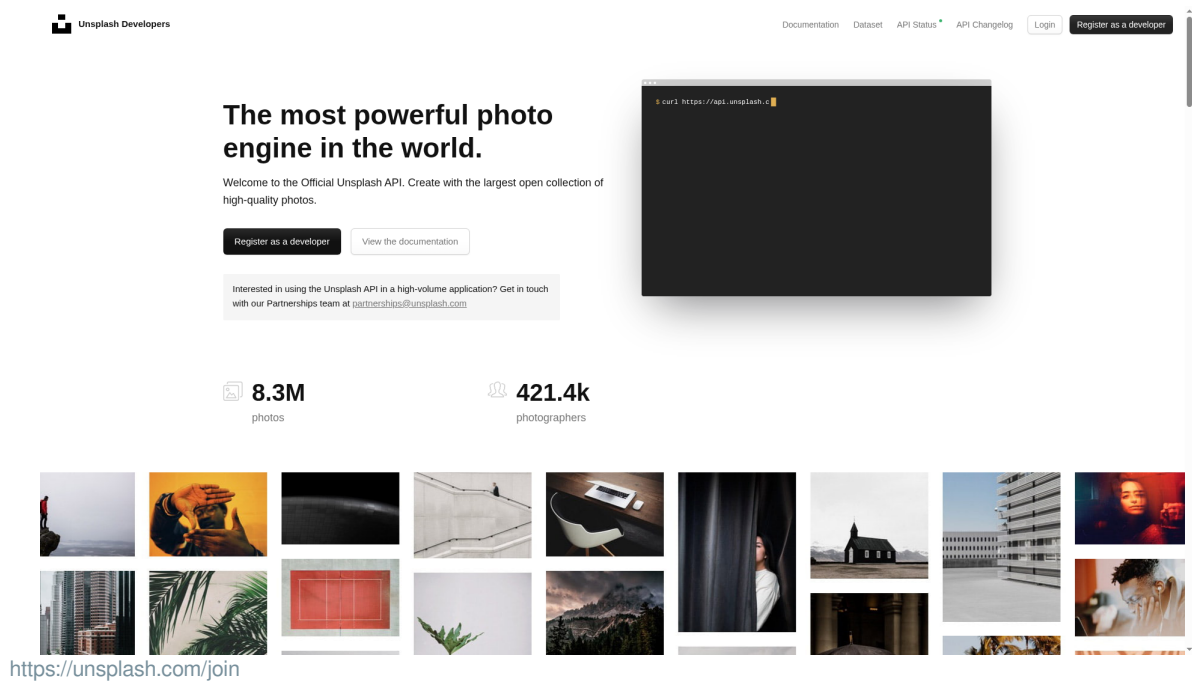

4. Reviewing the API Changelog

The AI navigates to the changelog to verify the visibility of recent API updates and improvements.

5. Bot Detection on Registration

The AI attempts to reach the developer registration form but is blocked by a security challenge.

6. Exploring Dataset Access Options

The AI views the dataset page to check the availability of Lite and Full data packages.

Check API System Status

Verify the operational status of the Unsplash API. Success: Status page shows system health.

The AI successfully verified the Unsplash API status, confirming that all systems are operational. It also explored the developer documentation, changelog, and dataset pages to ensure resource accessibility, though the registration process was blocked by bot detection.

- Navigate to <https://unsplash.com/developers>
- Click 'API Status' in the footer or resource links
- Verify the status page (status.unsplash.com) loads and shows system operational status.
