Workflow Exploration Report

System Status Monitoring

Website: <https://unsplash.com>

Feature Area: Developer Portal

Goal: Check the real-time operational status of the Unsplash API and services.

Generated: April 07, 2026 at 08:54 AM

The AI successfully navigated the Unsplash Developer portal to verify API documentation, system status, and dataset access options. While most technical resources and status pages were accessible, the AI encountered automated access restrictions when attempting to reach the developer registration area.

Step-by-Step Walkthrough

1. Unsplash Developer Portal Landing

The AI navigates to the main Unsplash Developers homepage to begin the system monitoring workflow.

The screenshot shows the Unsplash Developers homepage. The header includes the Unsplash logo, navigation links (Documentation, Dataset, API Status, API Changelog), and buttons for Login and Register as a developer. The left sidebar contains a table of contents for API Documentation, including sections like Getting started, Schema, Authorization, Pagination, Rate limiting, Dynamically resizable images, BlurHash Placeholders, Content safety, Supported languages, and Current user. The main content area features 'Quick shortcuts' with four cards: 'Setting up an application', 'Search photos by keyword', 'Get a random photo', and 'List new photos'. Below this is a 'Getting started' section with a brief introduction and a link to contact the API team. At the bottom, there is a 'Creating a developer account' section with a link to the API.

2. API Search Photos Documentation

The AI accesses the documentation for the Search Photos endpoint to verify request parameters and response schemas.

The screenshot shows the Unsplash API Search Photos Documentation page. The header includes the Unsplash logo and a 'SUBSCRIBE TO UPDATES' button. A green banner at the top indicates 'All Systems Operational'. Below this is a section titled 'Uptime over the past 90 days. View historical uptime.' which contains four charts for Backend Service, Data Service, Image Service, and Frontend Service. Each chart shows a 99.94% uptime for the Backend Service and 100.0% uptime for the other three services. Below the charts is a 'Past Incidents' section for April 7, 2026, which states 'No incidents reported today.'

3. Real-time System Status Check

The AI redirects to the external status dashboard to confirm that all Unsplash services are currently operational.

4. Unsplash Dataset Access Tiers

The AI explores the Unsplash Data page to review the differences between the Lite and Full dataset offerings.

5. Automated Access Restriction Encountered

The AI encounters an 'Access Denied' security wall when attempting to access the developer registration and application management sections.

6. API Changelog and Updates

The AI navigates to the API Changelog to review recent platform updates, including new feature enables and parameter removals.

Discovered Test Scenarios

#	Scenario	Type	Priority

System Status Monitoring

Check the real-time operational status of the Unsplash API and services.

The AI successfully navigated the Unsplash Developer portal to verify API documentation, system status, and dataset access options. While most technical resources and status pages were accessible, the AI encountered automated access restrictions when attempting to reach the developer registration area.

- Navigate to <https://unsplash.com/developers>
- Click the 'API Status' link in the navigation bar.
- Verify that you are redirected to <https://status.unsplash.com/> and that the 'All Systems Operational' message is visible.
