Workflow Exploration Report

Request Full Dataset Access

Website: <https://unsplash.com>

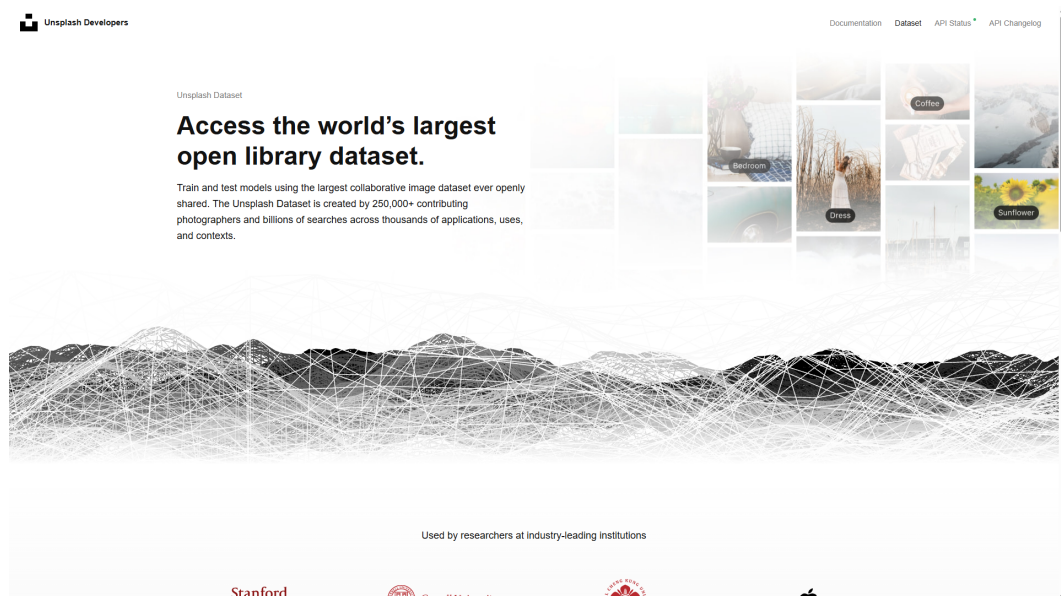

Feature Area: Datasets

Goal: Submit a request for the full Unsplash research dataset.

Generated: May 21, 2026 at 06:56 PM

Confidence: 95%

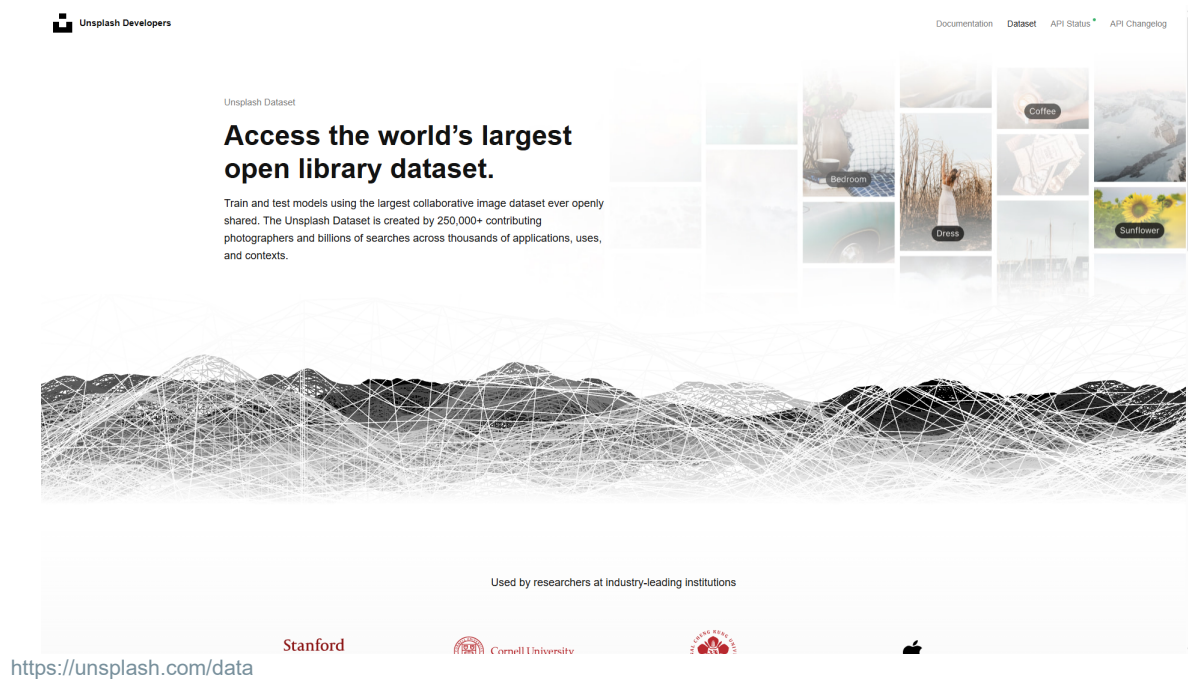

The AI navigated to the Unsplash Data page and located the section to request access for the full research dataset. However, upon clicking the request link, the workflow was interrupted by an 'Access Denied' error page, preventing the completion of the external form.

Step-by-Step Walkthrough

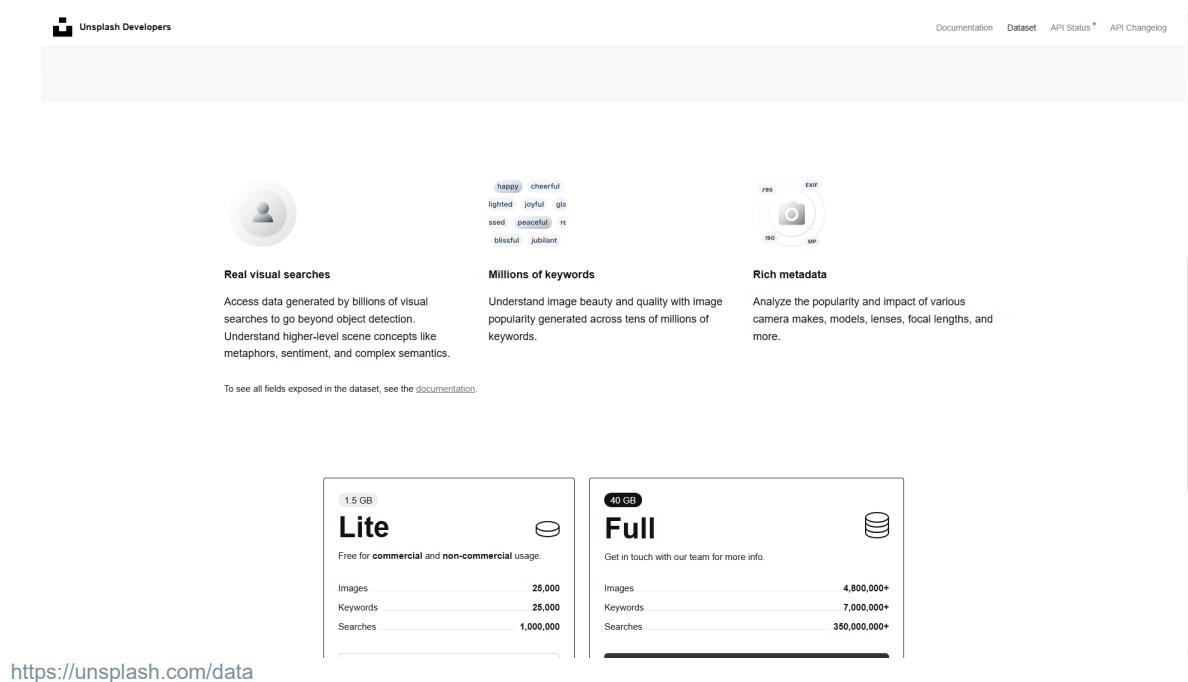

1. Navigate to Unsplash Data Page

The AI navigates to the Unsplash Developers dataset landing page to begin the request process.

2. Locate Full Dataset Section

The AI scrolls down the page to identify the 'Full' dataset option and its corresponding access requirements.

3. Encounter Access Denied Error

After attempting to redirect to the external request form, the AI encounters an 'Access Denied' error page.

Oh noes!

Access Denied: error code 4d1dbadffc0f385.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: Request Full Dataset Access -- Partial	partial_flow	low

Discovered Workflow: Request Full Dataset Access -- Partial

Attempt to submit a request for the Unsplash research dataset, ending at the external Typeform redirection which failed to load during execution.

The agent navigated to the Unsplash Data page and scrolled down to find the 'Request access' section. Upon clicking the 'Request access' link, the agent was redirected to an external Typeform URL. However, the external page failed to render content, resulting in a blank page and blocking the completion of the form.

- The workflow involves a redirection to an external domain (unsplash.typeform.com). Ensure the test context allows cross-domain navigation.
- The 'Request access' link is located deep on the page; Playwright's click() will handle the scroll, but the agent explicitly scrolled 1080px first.
- ☐ ☐ BLOCKER DETECTED: The external Typeform page was observed to be blank. Implementation should include a check for form visibility on the destination page to handle this failure case.
